Lunch meeting of the Imaging in Pregnancy SIG  
Monday 9 July 2018, 1:00-2:00pm  
Gorilla Room 5

**Co-Chairs:** Cheryl Albuquerque and Luc De Catte

The purpose of the meeting was to aim to get imaging at the forefront to enable providers in establishing prenatal diagnosis towards providing prenatal care.

Current practice trends in the US, Italy and Germany were discussed.

Since the aim of ISPD is to provide a standard for practice, it would be important to find a common standard and set goals for practice patterns in different countries. ISPD recognizes that various societies can establish practice trends in different countries. The goal for ISPD is to establish standards for prenatal imaging to assist in genetic diagnosis.

The co-chair Luc added that first trimester anatomy is the focus to establish early prenatal diagnosis with improved outcomes for maternal morbidity and mortality. Dr Cheryl Albuquerque felt that webinars could offer providers instruction and provide aids to diagnosis and treatment.

Dr. Palladini added his input on challenges he faces in Italy and is willing to contribute by a webinar on neurosonogram and mild ventriculomegaly.

Dr. Chauhai added that though he is the expert in ultrasound, he would be pleased to contribute half an hour of didactic teaching.

Webinars and lectures can help in setting standards for practice recommendations. However, imaging with prenatal diagnosis applications can have more of an impact in improving maternal and fetal outcomes.
